

Asset, Configuration, and Compliance Management (ACCM)

Are you confident in your compliance posture? Do you know what devices/software are EoL and EoS? Do you know configuration changes and who is making them? Do you know which security advisories or risks may impact your network? Do you know how your network devices comply with your specific regulations? How do you ensure network availability and disaster recovery? Enventis' Asset, Configuration and Compliance Management Service provides the solution to these questions and more, leveraging Pari Network's Paritra Security Appliance.

Discovers and shows the complete inventory, security advisory and SMARTnet posture of your Cisco Network including:

- Complete listing of IP addresses, host names, devices, models, software versions, memory/flash and serial numbers
- All network data reports (like routing tables, VLANs, ACLs, AAA sessions, user sessions, interface information, etc.)
- All vulnerabilities associated with current status of devices and identifies vulnerabilities by severity or by policy
- Identifies the services as enabled or disabled
- Easy storage and review of configuration (both running & startup) changes per device and tracks all configuration histories with easy to search reports
- Identifies all devices that are affected by Cisco Security Advisories (PSIRT) Shows the lifecycle of devices, device modules and software
- Shows EoX (End of Sale, End of Life and End of Support) reports, including graphs to indicate devices that will be EoL by quarter
- SMARTnet maintenance contract management

Provides compliance/best practice view of all devices or interface groups

- Compares your best practice/compliance policies to devices
- Provides a report of all out of compliance areas
- Shows device capabilities (how/whether devices can be configured to meet compliance or best practice)
- Constantly monitors policy profiles to make sure devices are always compliant to the best practice/compliance mandates

Remediation

- Gives option to apply patch or configuration immediately or on a scheduled basis
- Provides recommendations on how to get devices to best configurations
- Provides detailed mitigation and assessment reports

Audit Reports

Regulatory Compliances

- PCI
- HIPAA
- ISO 17799 (BS 7799)
- SOX
- GLBA

Security Guidelines/Best Practices

- NSA Security Guidelines
- Cisco SAFE Implementation
- SANS Router Guidelines
- Corporate Security Guidelines

Vendor Specific Advisories

- Comprehensive PSIRT Analysis
- EoX Reports

Advanced Analysis Reports

- Compliance Capability
- Services
- Device Capability
