

FoIP: Fax over IP

A modern faxing solution with the flexibility to meet today's business needs.

Turn your unified messaging into a true one stop shop by adding the ability to handle faxes from the same account that already handles email and voicemail. Or utilize the multi-function printer you already have without the additional cost and burden of an analog line.

Seamless Integration

- No expensive hardware to buy
- No software to install
- Utilizes current resources – T1 bandwidth, email platform
- Fax any document type – a PDF, TIF, Excel spreadsheet, Word file

Directory Integration

Integrate the fax users into your current directory. No extensive changes to the set up make integration quick, easy, and clean.

Secure

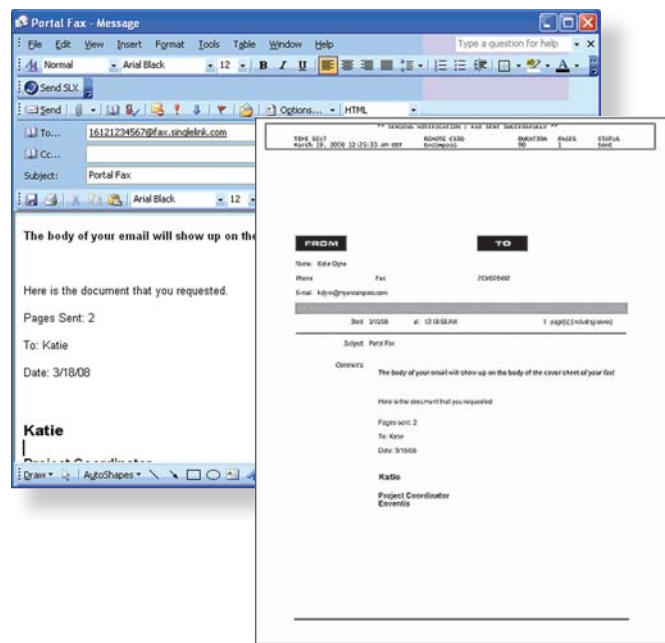

Faxes are received by the intended recipient directly rather than waiting on a public machine. Your customer information remains private.

Reliable

SingleLink FoIP utilizes T38, the newest industry standard protocol. T38 is cutting edge and backward compatible to make sure we meet your needs without costly upgrades. We also utilize a fallback protocol to provide redundancy to make sure you have the best possible service.

Unified Messaging

Get faxes delivered to the same inbox as voicemails and emails. No need to track multiple mailboxes. Receive, send and organize faxes as easily and quickly as you do email – anywhere, anytime.

Regulatory Compliant

- FoIP generates HIPAA- and SOX-compliant taglines at the top of pages like a traditional fax
- Generate notifications of success or error for outbound faxing
- Organize, store and recall email confirmations any time

Go Green

FoIP is a great alternative for eco-minded companies considering paperless initiatives. Receive and distribute faxes electronically. Reduce the need for copy paper and ink for a traditional fax machine. Save faxes to a private or shared space creating less demand for storage space and file cabinets within the office.
